Assignment #3:
Read the attached article abstract that pertains to your discipline. Discuss whether or not you think the evidence presented is worth using (reliable, accurate, valid, etc.). Then discuss the results to determine if they are meaningful and useful (make a difference, clinically or statistically significant, precise, etc).

Assignment #4:
Discuss how you would use this evidence (or not) in your treatment plan and why. How would you explain your plan to your patient using this evidence.
