We want to teach you about our friend the cone!

A cone is a shape that looks like a triangle, but the bottom is round. A cone has one point at the top and it is a 3 dimensional shape.

A 3 dimensional shape has length, width and height. 3-dimensional shapes are not flat.

You can see our friend the cone everywhere you go.

You can see cones in some stores. A birthday hat is in the shape of a cone.

Kids love to eat ice cream cones! This is a yummy cone to eat.

Mr. Bond uses cones in P.E. so kids can run around.

A cone has one face. A face is a flat surface of the shape. Here is the face on a cone.

An edge is where 2 faces meet. A cone has 0 edges.

A cone has one vertex at the tip top! Look, its right here!

Here is what a cone would look like before you put it together.

We hope you had fun learning about our friend the cone. Bye!

From the cone group of Vanessa, Emili and David D.
