A questionnaire was randomly given to 100 adults at the Pacific University College of Optometry. The questionnaire was given to the adults at the time of their dispensing.

The purpose of this information is to be used to aid an Optometrist in deciding whether he should be his own dispenser of glasses or leave that portion to someone else not in his own office. This questionnaire was also administered to see if the public may be more professionally served by the Optometrist in his dispensing capacity.

50 males and 50 females were surveyed by a written form which is included in this report. The results are quite interesting and are listed here:

Question (1): "Have you ever been unhappy with a pair of glasses?"

Response:

<table>
<thead>
<tr>
<th></th>
<th>Female</th>
<th>Male</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>26</td>
<td>20</td>
<td>46</td>
</tr>
<tr>
<td>No</td>
<td>24</td>
<td>30</td>
<td>54</td>
</tr>
<tr>
<td>Total</td>
<td>50</td>
<td>50</td>
<td>100</td>
</tr>
</tbody>
</table>

(52% unhappy previously)

(40% unhappy previously)

(46% unhappy previously)

Question (2): "If unhappy the reason was?"

Response:

<table>
<thead>
<tr>
<th>Reason</th>
<th>Female</th>
<th>Male</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cost</td>
<td>3</td>
<td>1</td>
<td>4</td>
</tr>
<tr>
<td>Comfort</td>
<td>23</td>
<td>10</td>
<td>33</td>
</tr>
<tr>
<td>Blurred vision</td>
<td>2</td>
<td>2</td>
<td>4</td>
</tr>
</tbody>
</table>

(6% unhappy previously)

(2% unhappy previously)

(4% unhappy previously)

(2% unhappy previously)
It is of interest to note that 72% of those unhappy was because of discomfort. Several comments were noted in this section under the category of "other." They are listed as follows:

(Females) 1. "Maybe too heavy. Caused skin rash on my nose."
2. "Looks" (2 commented on this)
3. "Poor frames" (desirability)
4. "Given prescription like window glass"
5. "No tint was given-glare bothers me"
6. "Room slants"
7. "Appearance"
8. "Headaches"
9. "Frames were not good"
10. "Dizziness"

(Males) 1. "Screw comes loose"
2. "Plastic lenses scratched"
3. "Vision strained"
4. "Style was questionable after purchase"
5. "Looks"
6. "Style of frame"
Question (3): "If unhappy, did you purchase your glasses at the same place your vision was examined?"

Response:  
- Female: 21 yes, 5 no (81% same place)  
- Male: 12 yes, 8 no (60% same place)  
- Total: 33 yes, 13 no (72% same place)  

Of the total population, 33% from a random sample might be expected to be unhappy with a pair of glasses they purchased from the same place their vision was examined.

Question (4): "Would you prefer to purchase your glasses at a different place from where your vision was examined?"

Response:  
- Female: 45 of 50 said no (90%)  
- Male: 46 of 50 said no (92%)  
- Total: 91 of 100 (91%)  

The individuals which responded yes to this question answered as to why as follows:

<table>
<thead>
<tr>
<th></th>
<th>lower cost</th>
<th>larger frame selection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Female</td>
<td>9 of 9</td>
<td>5 of 9</td>
</tr>
<tr>
<td>Male</td>
<td>4 of 4</td>
<td>1 of 4</td>
</tr>
<tr>
<td>Total</td>
<td>13</td>
<td>6 of 13</td>
</tr>
</tbody>
</table>

Some of the female population responded to the space provided as "other" and stated the following:

1. "Advisory help in selecting frames"
2. "Better glasses"
Question (5): "If you purchased your glasses at a different place than where your vision was examined and were not fully satisfied, whom would you return to for advice?"

Response:

<table>
<thead>
<tr>
<th></th>
<th>Examiner</th>
<th>Place Purchased</th>
</tr>
</thead>
<tbody>
<tr>
<td>Female</td>
<td>23 of 36 (63%)</td>
<td>13 of 36 (37%)</td>
</tr>
<tr>
<td>Male</td>
<td>15 of 28 (53%)</td>
<td>13 of 23 (47%)</td>
</tr>
<tr>
<td>Total</td>
<td>38 of 64 (60%)</td>
<td>26 of 64 (40%)</td>
</tr>
</tbody>
</table>

Since 64 of 100 people questioned answered this question, the following is an assumption: 38% of the population could be expected to return to the place their vision was examined if they were unhappy with a prescription or other reason.

Question (6): "In selecting a frame would you prefer to:"

(a) Look at whole display of frames
(b) Have frames shown to you by dispenser

<table>
<thead>
<tr>
<th></th>
<th>Females</th>
<th>Males</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>35 of 50 or 70% prefer whole display</td>
<td>25 of 45 or 55% prefer whole display</td>
<td>60 of 95 or 63% prefer whole display</td>
</tr>
<tr>
<td>37% would rather have frames shown to them by the dispenser.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Question (7) "Do you feel that in the past you have received all the advice from your vision specialist that was necessary for your complete satisfaction?"

Response:

<table>
<thead>
<tr>
<th></th>
<th>Females</th>
<th>Males</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>82% felt they have</td>
<td>82% felt they have</td>
<td>82% yes</td>
</tr>
</tbody>
</table>
Several comments explaining why the 18% of the people whom were unhappy follows:

(Females) 1. "Was satisfied here"
2. "Not enough information previously"
3. "I go to an Ophthalmologist and I don't think they get into just examining eyes"
4. "This is the first really thorough exam I have had (2 previous Calif.)"
5. "I had a more complete exam here"
6. "Have had difficulty with both vision and comfort—Optometrist doesn't agree"
7. "I think Dr. should explain how to take good care of your eyes and glass Have helper if they're too busy"

(Males) 1. "Not complete enough"
2. "Feels they pretend to know more about what you want to wear than I do"
3. "Optometrist didn't fully explain questions on style and personal activities"
4. "Examiner wouldn't disclose needed prescription—too expensive"
5. "Incomplete"
6. "To busy to care"
7. "Didn't explain what the prescription was for"
In summary, it can be said that about one-half of the population has been unhappy at least one time when dispensed with a pair of glasses. About three-fourths of these people are dissatisfied for reasons of discomfort. Also three-fourths of the people whom have been unhappy with a pair of glasses were dispensed at the place where their vision was examined. An overwhelming majority of greater than 9 to 1 would prefer to purchase glasses where their eyes were examined. About one-half of those that would rather seek another location to purchase a pair of glasses, would do so for lower cost. And the remaining half because of a larger selection of frames somewhere else. If a patient was dissatisfied with a pair of glasses to whom would they return? Three-fifths would return to the examiner, and two-fifths would return to the place purchased. Slightly more than 3 out of 5 people would prefer to look at a whole display of frames while the remaining two out of five would prefer to have the frames shown to them by the dispenser. Finally, eighteen % said they did not receive all the advise from their vision specialist that was necessary for their complete satisfaction.

In conclusion, we feel that this is a valid and worthwhile survey. We believe that since most people will be
dispensed at the place where their vision was examined and since about one-half of the population was dissatisfied, at one time or another, that either the vision specialist himself or a trained dispenser should take careful care and consideration when performing the art of dispensing.
Male ☐ Female ☐

Have you ever been unhappy with a pair of glasses? Yes ☐ No ☐

If unhappy the reason was:

- cost ☐
- comfort ☐
- blurred vision ☐
- other

If unhappy, did you purchase your glasses at the same place your vision was examined? Yes ☐ No ☐

Would you prefer to purchase your glasses at a different place from where your vision was examined? Yes ☐ No ☐

If yes, do you feel the reason would be:

- lower cost ☐
- larger selection of frames ☐
- other

If you purchased your glasses at a different place than where your vision was examined and were not fully satisfied, whom would you return to for advice?

- examiner ☐
- place purchased ☐

In selecting a frame would you prefer to: ☐ Look at a whole display of frames

☐ Have frames shown to you by the dispenser

Do you feel that in the past you have received all the advice from your vision specialist that was necessary for your complete satisfaction?

☐ Yes ☐ If no explain

☐ No
